Research Study Description

Research Study Name:	Micronutrients for ADHD in Youth: The “MADDY” study
What is the goal of this Study?	We are looking to see if a multivitamin/mineral supplement is helpful in improving symptoms of Attention Deficit Hyperactivity Disorder (ADHD) in children ages 6 to 12.
Who can join this study?	Your child may qualify for this study if: <ul style="list-style-type: none">• They live in southern Alberta (within driving distance of Lethbridge)• They are between the ages of 6-12 years• They are able and willing to swallow pills
What will happen if I take part in this study?	<p>Participants will be randomly assigned to either the vitamins and minerals group or a placebo group for 8 weeks. At the end of the 8 weeks, all participants will be eligible to take the vitamins and minerals for the next 8 weeks. The study will be 16 weeks in total.</p> <p>Participants will visit the University of Lethbridge five times (around one time per month) to meet with study researchers to answer questionnaires and receive the product.</p>
Start date of study:	Ongoing
